# CS4400 Cheating Policy

Print your name in the upper right hand corner in the space provided.

Apologies in advance for putting you through this. It irks me to no end that cheating is on the rise in graduate school in a professional degree program such as Computer Science and Electrical and Computer Engineering. The bottom line is that the profession has no room for cheaters and if you cheat you will fail the class and the infraction will be kept in your permanent record. There is a normal University appeal process for any disciplinary action but for this class there will be no warnings - cheating is cheating and if you're caught once you will fail and we will not grade any of your subsequent work. Further disciplinary measures including dismissal are possible.

**CHEATING in CS4400 IS** sharing code either by copying, retyping, looking at, or supplying a copy of a file.

**CHEATING IS NOT** helping others use the system, helping with high-level design or conceptual issues, or helping others debug their code.

Automatic cheating checkers will be used to analyze your code and those of your classmates as well as the code from previous cs4400 classes.

I expect you all to be honest and I will treat you as a colleague until this attitude is proven to be wrong.

Sign below to indicate that you understand what cheating is and what will happen to you if you cheat.

If you don't sign then you can not be registered for the class.

I have read and understand the Cheating Policy as specified above:
